## APPLICATION INFORMATION

### FIGURE 1 - BIDIRECTIONAL COMMON-MODE USB PROTECTION

Circuit connectivity is as follows:

- Pins 1, 2, 3 and 4 connected to ground.
- Pins 5 and 6 connected to I/O Line D+.
- Pins 7 and 8 connected to I/O Line D-.

### CIRCUIT BOARD RECOMMENDATIONS

Circuit board layout is critical for electromagnetic compatibility protection. The following guidelines are recommended:

- The protection device should be placed near the input terminals or connectors, the device will divert the transient current immediately before it can be coupled into the nearby traces.
- The path length between the TVS device and the protected line should be minimized.
- All conductive loops including power and ground loops should be minimized.
- The transient current return path to ground should be kept as short as possible to reduce parasitic inductance.
- Ground planes should be used whenever possible. For multilayer PCBs, use ground vias.
